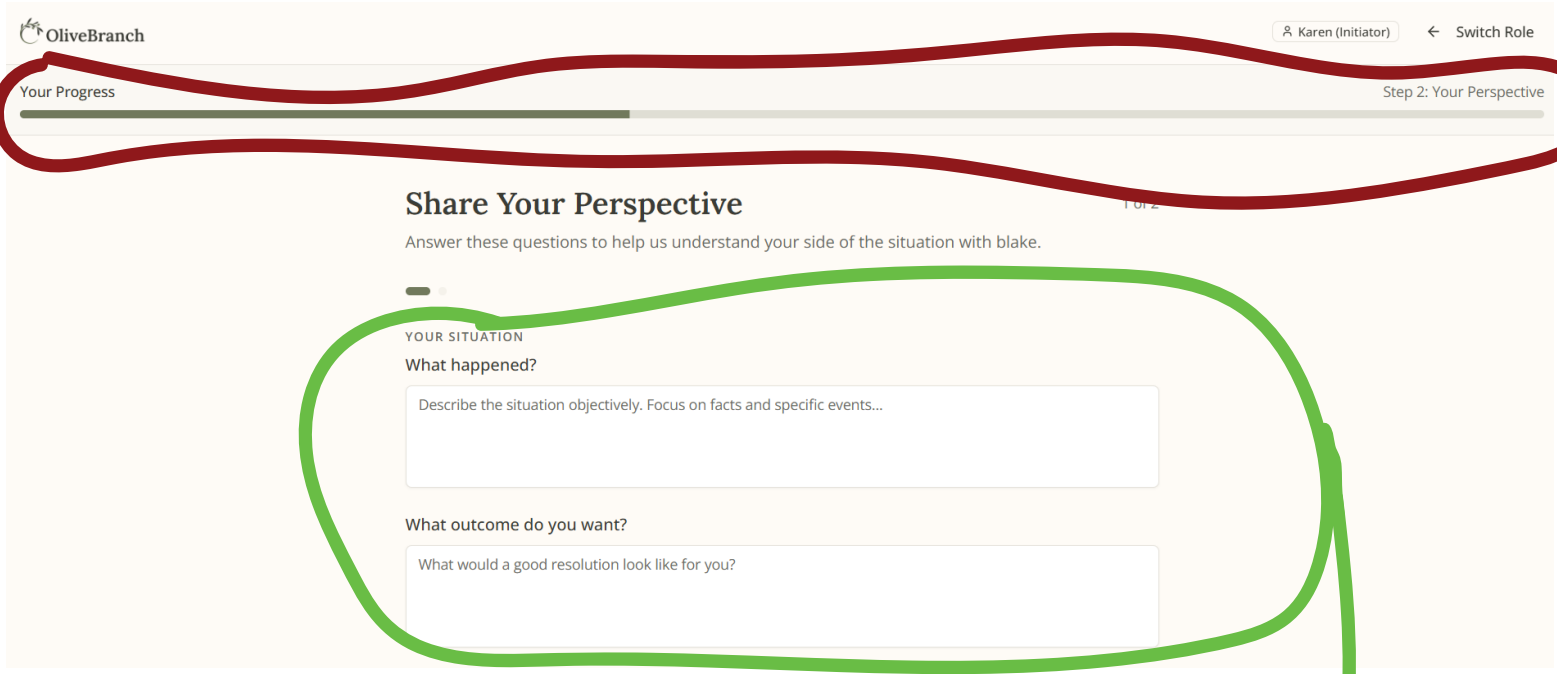
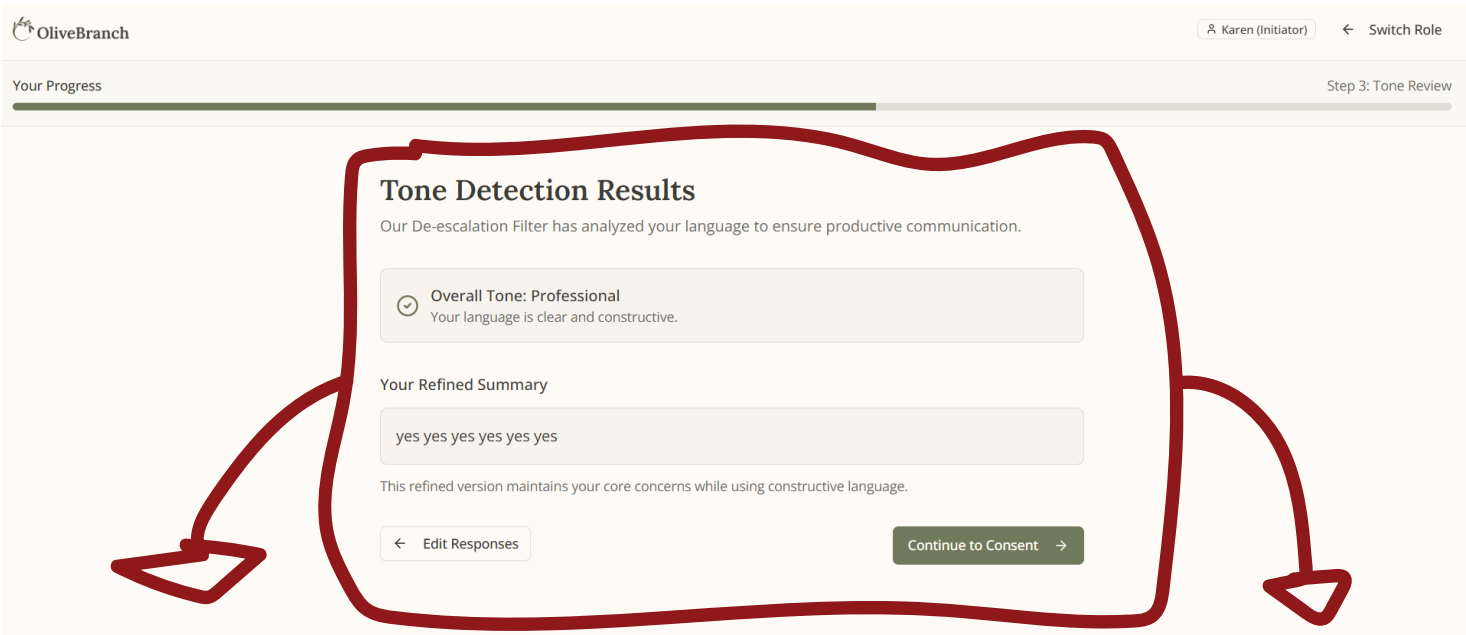
Keep the progress bar on top

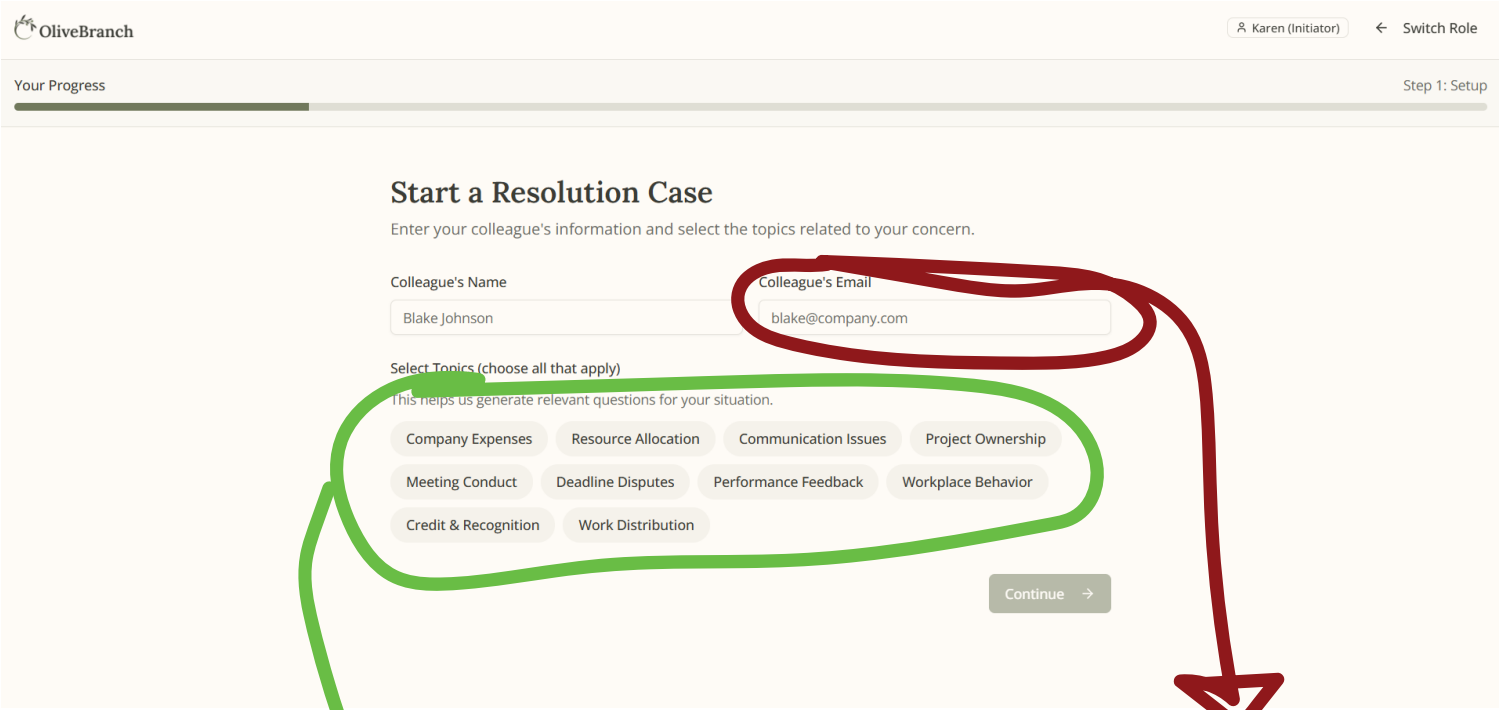


Make these two questions mandatory to fill.



The user is supposed to see their message after being de-escalated by the filter, not what was introduced.

If the user doesn't like the de-escalated version, there should be a button to generate another version

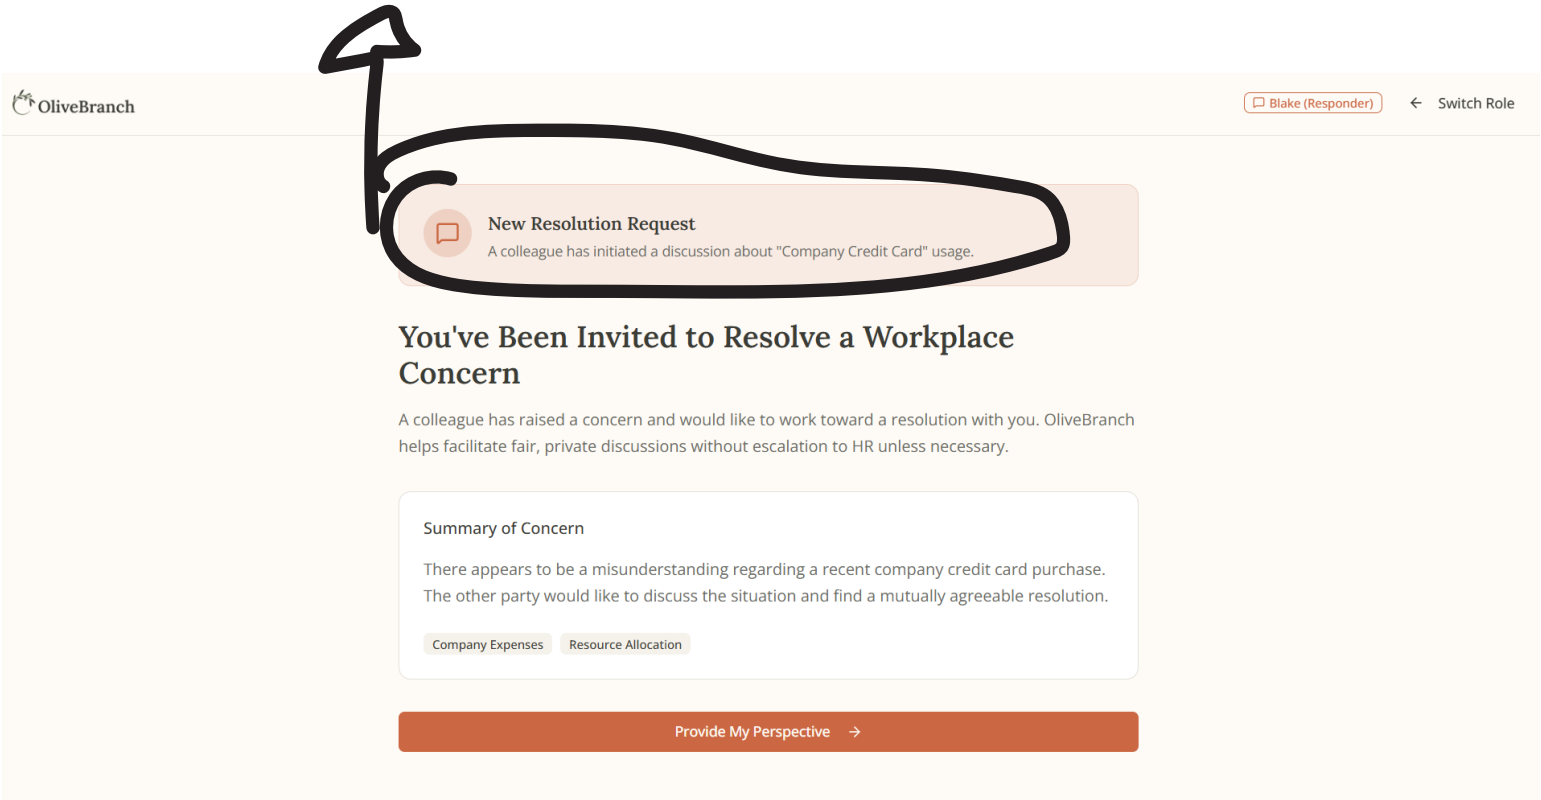


Add an email validation

Arrange the keyword in alphabetical order

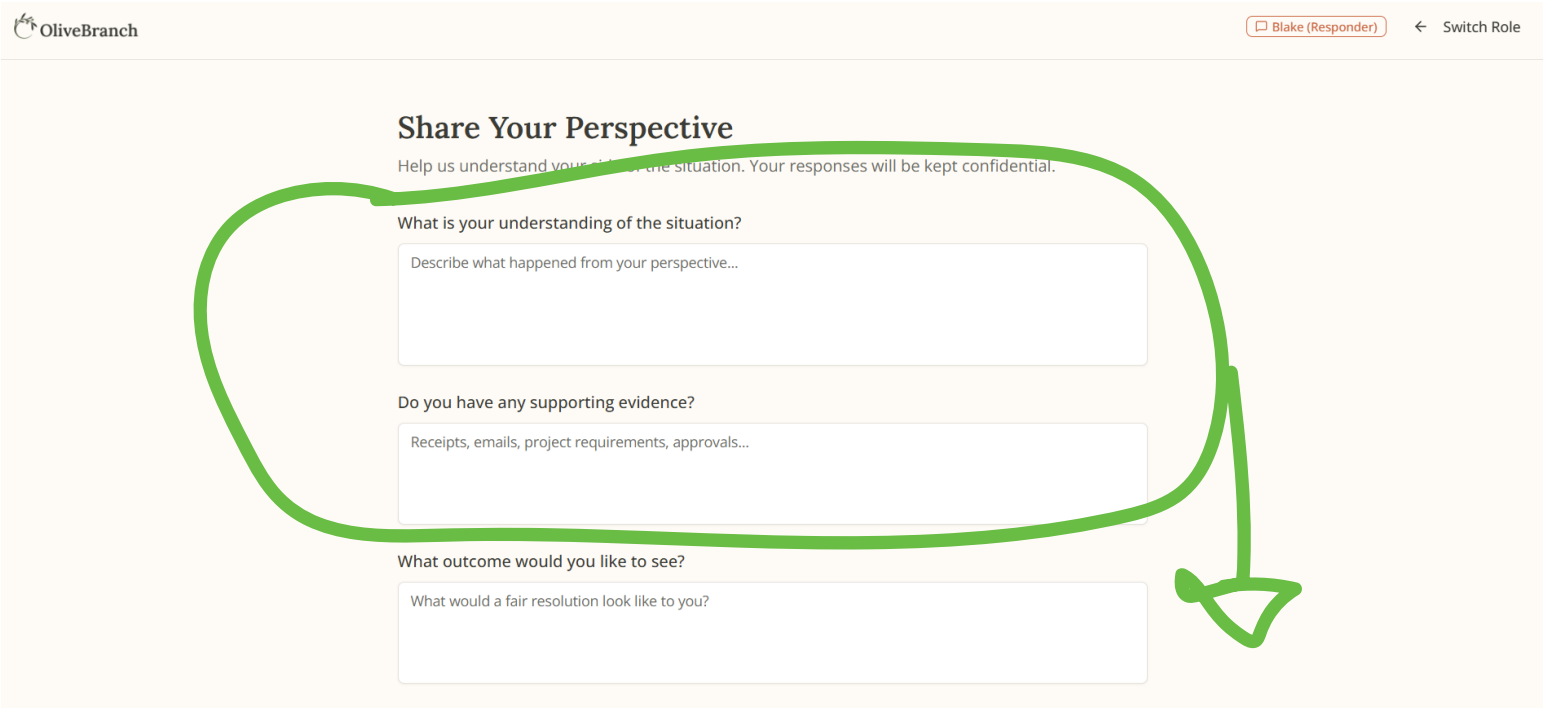
Users get confused and add their name, instead of the colleague name. Make it clear, that is about the colleague, and not who is filling it.

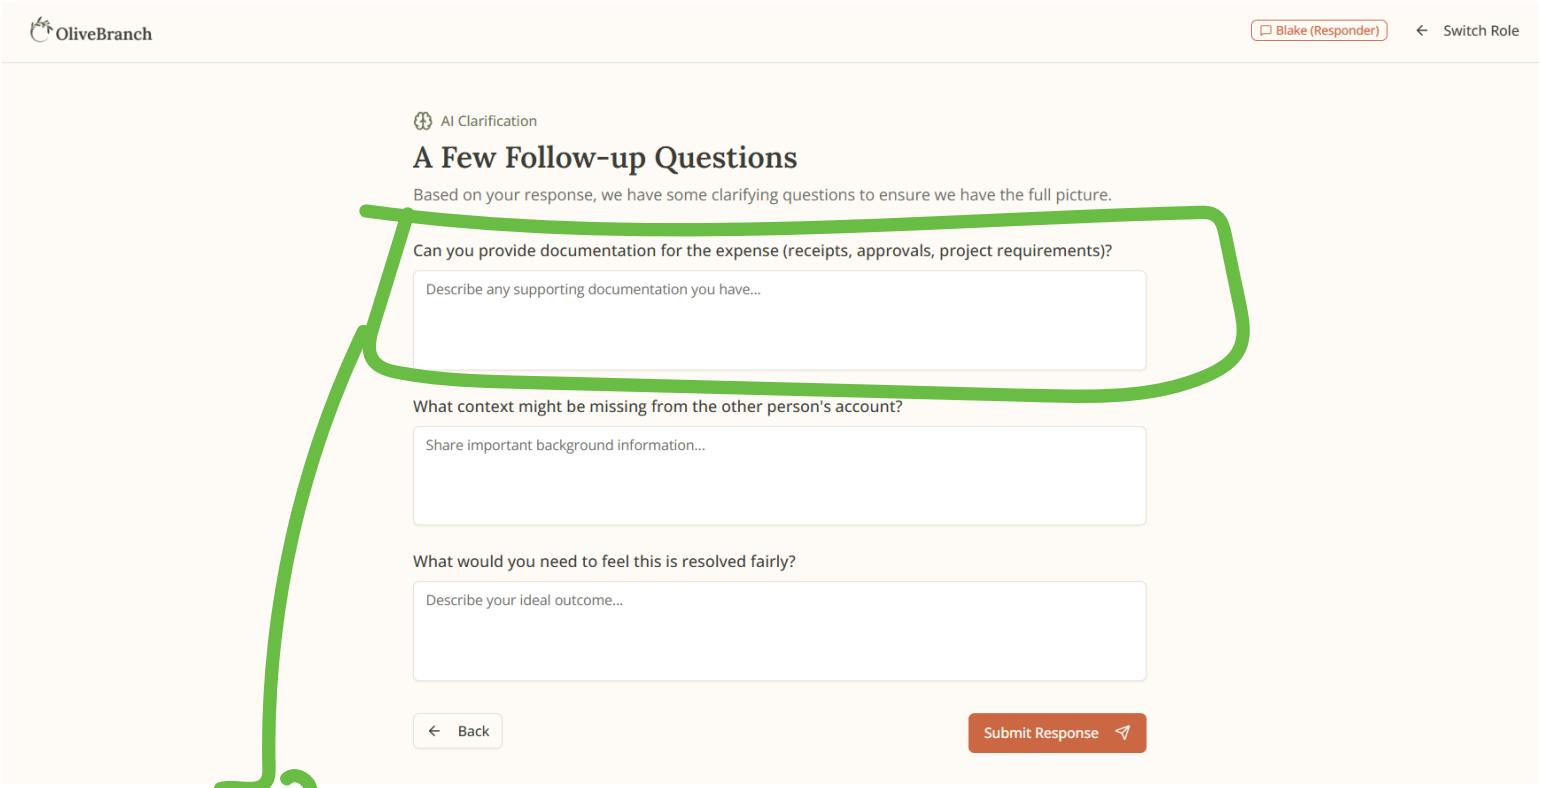
Change to copy to say “someone has extended an olive branch to you”, and change the icon from a speech bubble to a olive branch.



There should be a clarification in the demo, that this screen is supposed to be an email received (Maybe wrap it around a generic email interface). And “Provide My Perspective” should lead to OliveBranch.ai

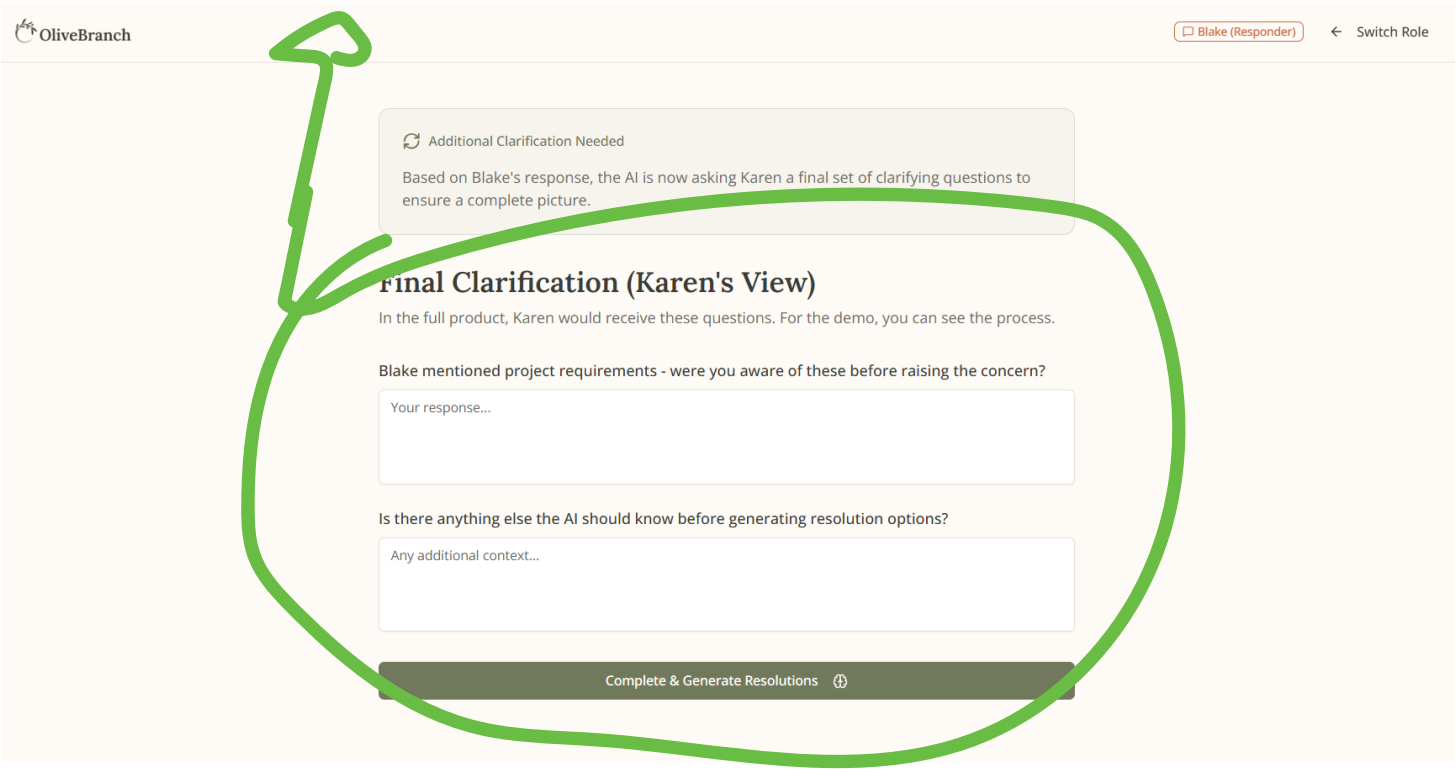
The user should be able to see the summary of concern before having to share their perspective



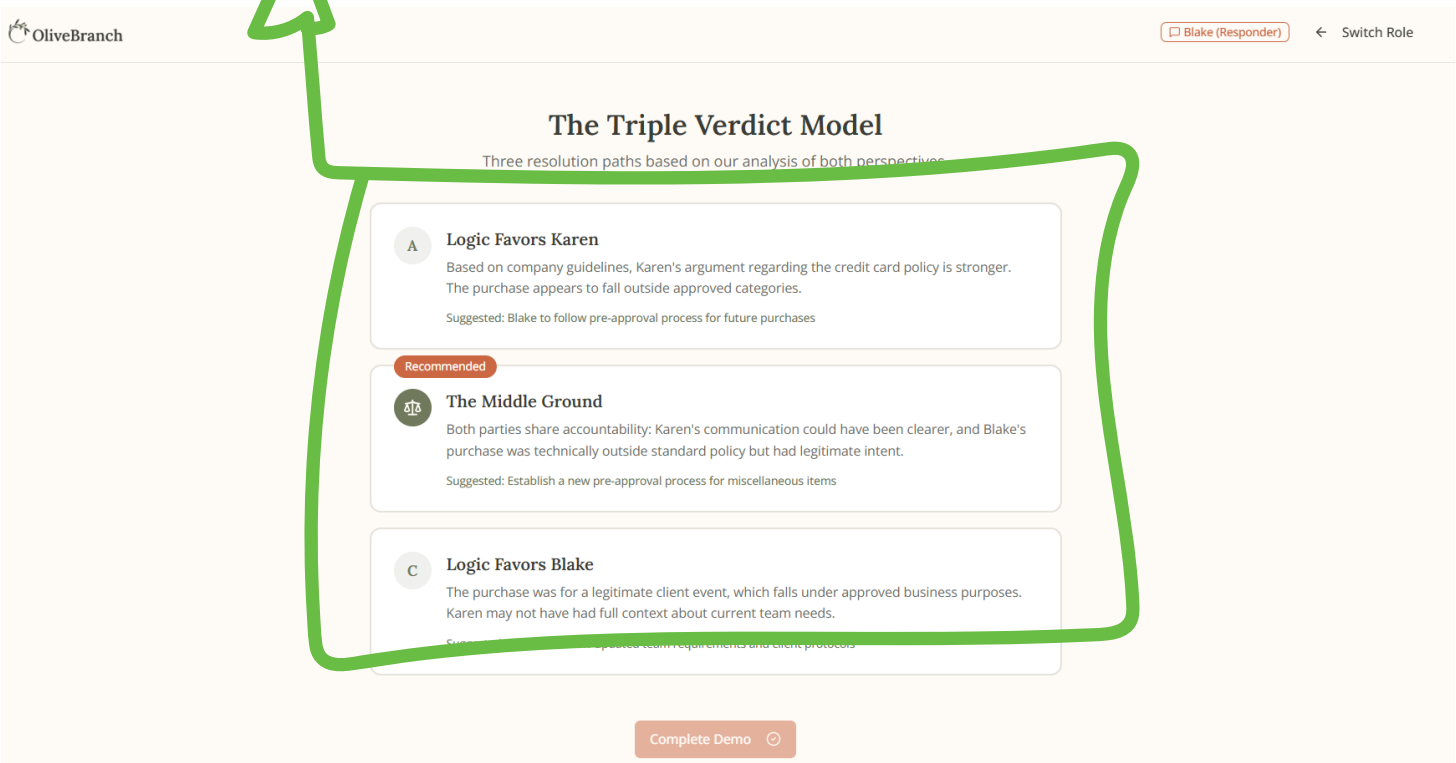


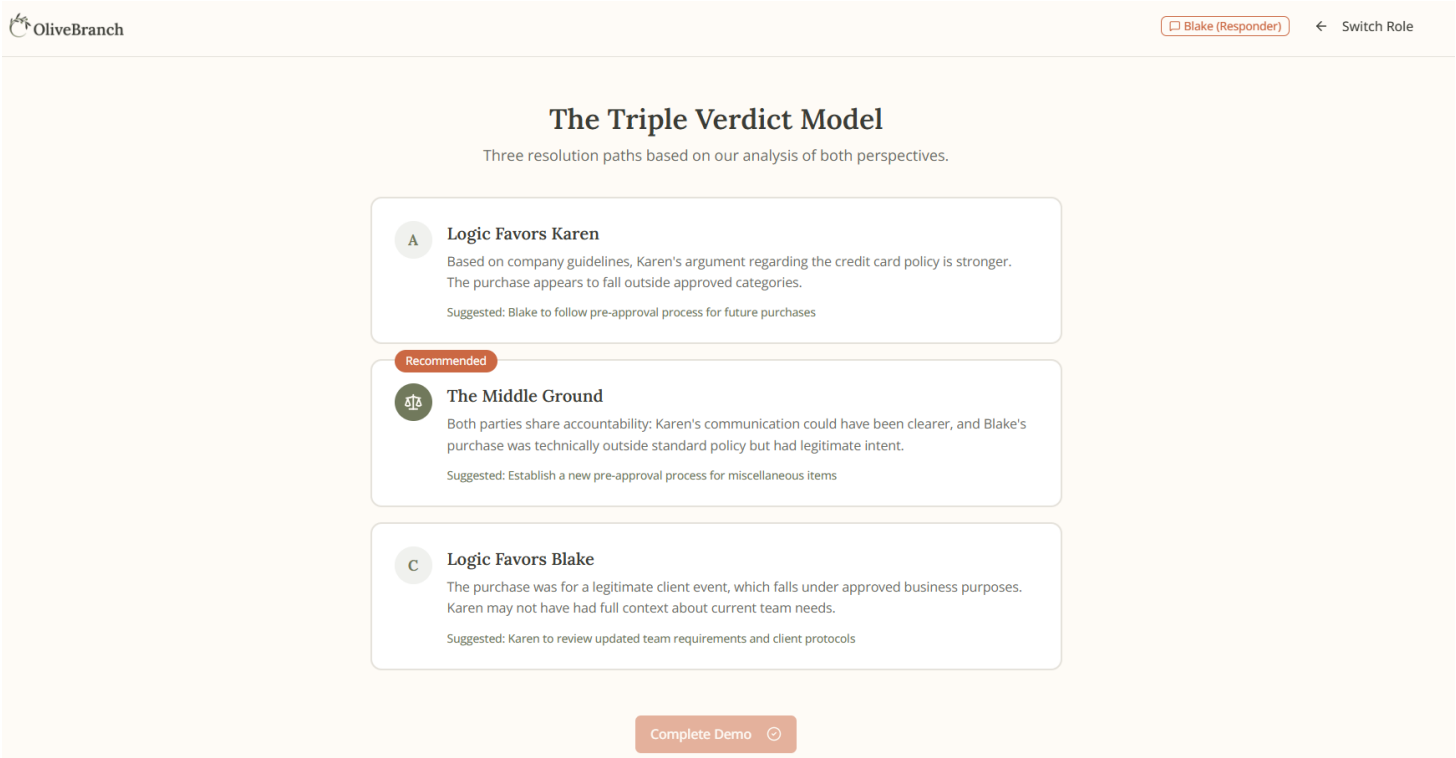
The evidence can be also submitted as a document, 10mb max per file. This field can be optional.

Should change perspective for final clarification questions to switch to Karen's view after Blake responded



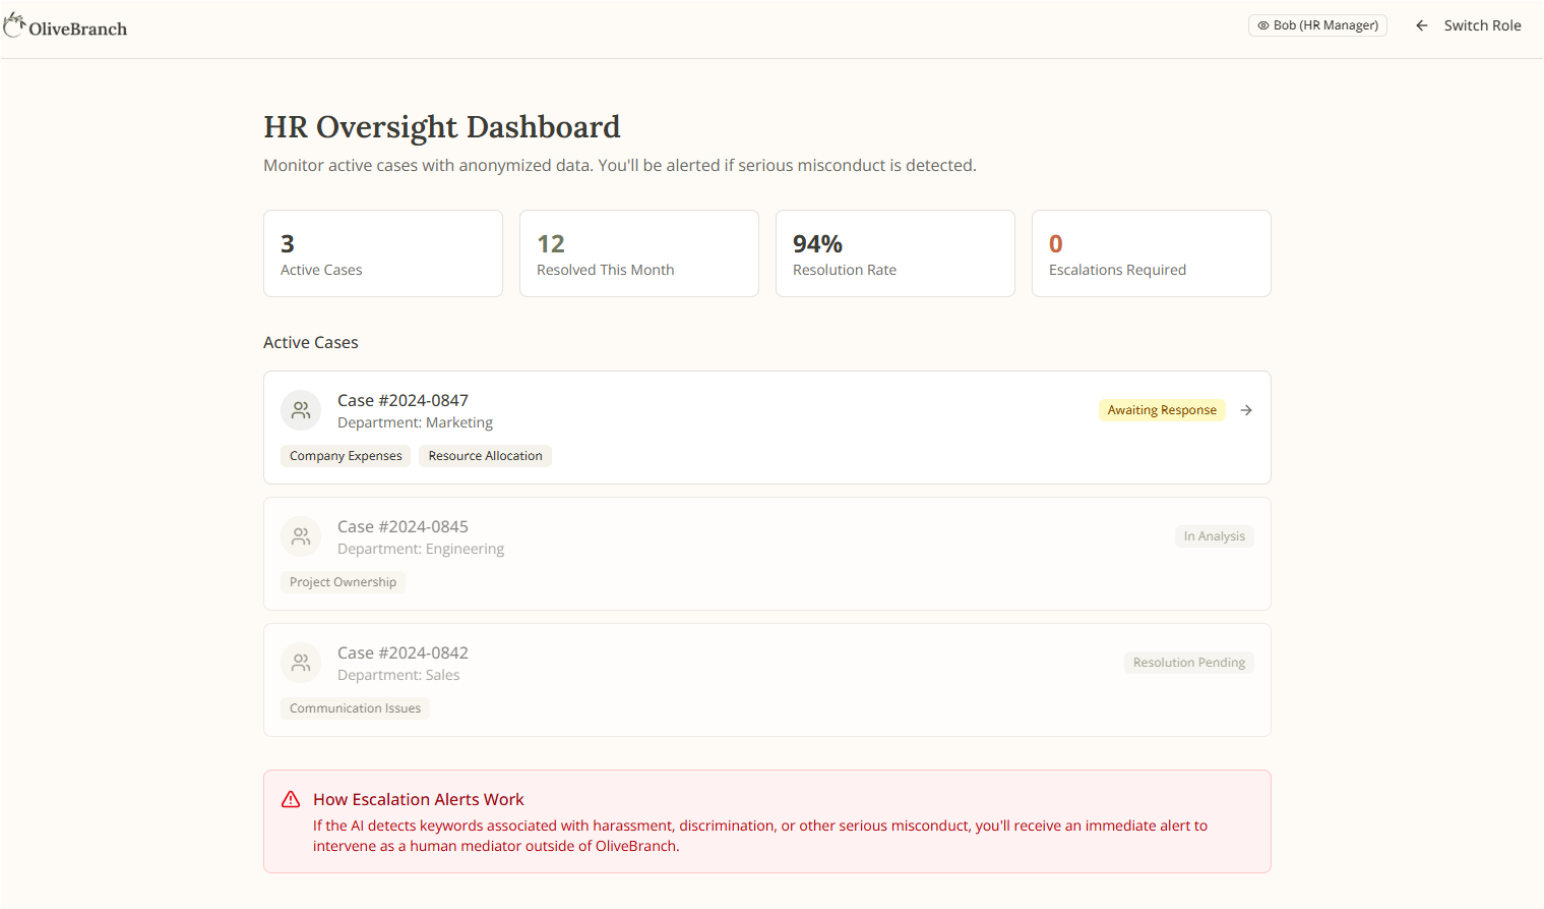
The cards should be ordered in columns, instead of rows. Because having one on top of the other could show superiority





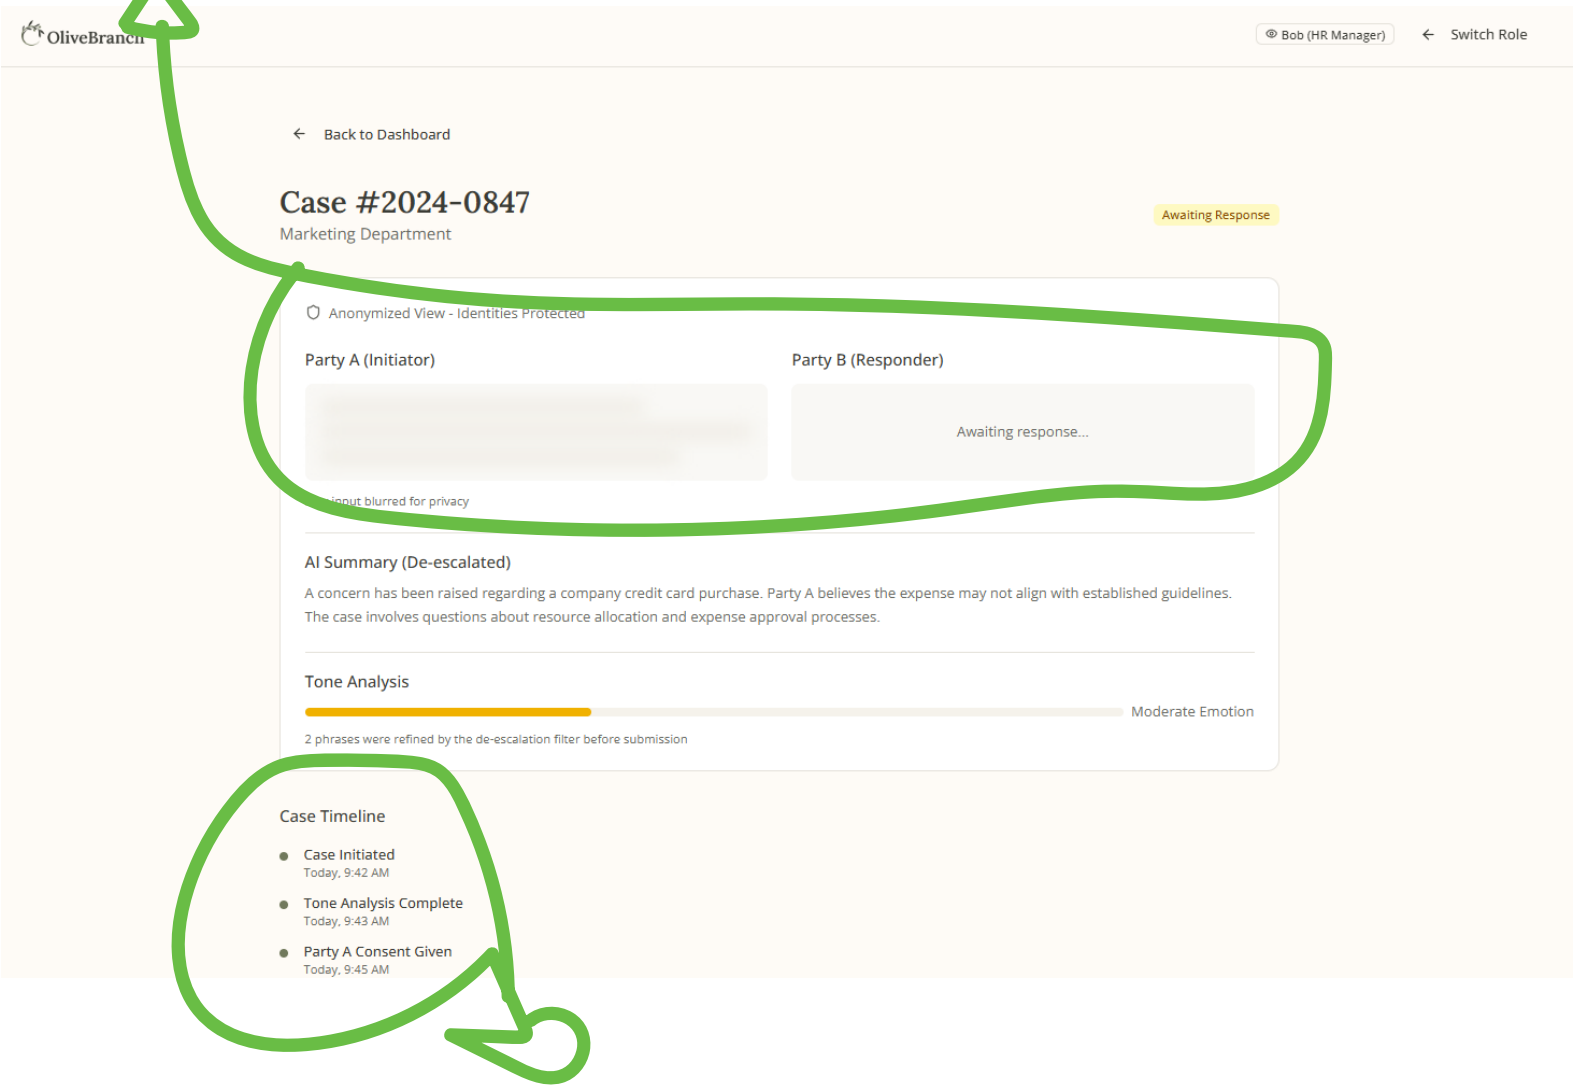
New Post-Verdict User Journey

- Selection Screen: Users see Outcomes A, B, and C with their respective Reasoning Breakdowns.
- Consensus Check: If both click "Accept" on the same outcome, the case closes with the Repair Package.
- The Deadlock Trigger: If one party rejects all options, the "Regenerate" and "Escalate" buttons appear.
- AI Retry (Optional): If they choose to regenerate, the AI processes a new "Solution Builder" set.
- Final Escalation: If no agreement is reached after the retry, the system initiates the "Bob Protocol".
- Bob Protocol: HR's anonymized view converts into a "Full Disclosure" view so he can mediate with the complete context.



Add an option for HR to edit and upload the policies of the company, so the AI can judge based on that as part of the context.

Place the anonimized view at the end of the wrapper instead of being at the top.



The timeline should have more hierarchy and be at the first fold, not at the end of the page.
